

Page one content begins here for the multi-page fixture. This is the first page of a three-page PDF.
Retrieval harness expects text from all pages to be present after extraction.

Page two content for the multi-page fixture. Middle pages must not be silently dropped by the extraction layer. Each page contributes unique text to verify concatenation.

Page three content ends here for the multi-page fixture. If this text appears in a query result the extractor handled all pages correctly. End of multi-page test fixture.
